She’s responsible for health initiatives, including clinical product development, innovative clinical partnerships, and medical research. She also leads the regulatory and quality teams at Apple.
Help shape a healthier society

Our bodies are complex anatomies that require attention physically and mentally. And our ability to make good health and preventative decisions about our bodies relies on access to important and accurate health information. How can we improve the health and wellness of ourselves and others?

For all educators, students, and individuals to thrive at school and at work, it’s crucial to close the gap in health disparities that exist for underrepresented communities based on race, socioeconomic status, and access to education.

Businesses and educational institutions around the world reflect the communities they serve. And today, learning happens everywhere — not just in classrooms.

To begin the journey of making lasting social change, we’ve created this guide so you can help shape a healthier society by exploring mind, body, and health literacy.

As you take on the fourth challenge in this series, **Help Shape a Healthier Society**, be prepared to reflect on the impact health inequities have on our communities, and be ready to make a difference individually and globally.
Health and Wellness

*Health* is the state of living. *Wellness* is the state of living a healthy lifestyle. The combination of the two, *health and wellness*, has become an important approach for taking care of ourselves, lowering stress, and reducing the risk of illness for ourselves and our communities — especially those with limited access to health services and information.

**Mental Health**
A state of well-being in which the individual realizes their own abilities, can cope with the normal stresses of life, can work productively and fruitfully, and is able to make a contribution to their community

Source: [who.int](https://who.int)

**Physical Health**
The well-being of the body and the proper functioning of the organism of individuals, which is a normal condition for individuals who are not suffering from any type of sickness

**Health Literacy**
The degree to which individuals have the ability — or the degree organizations equitably enable individuals — to find, understand, and use information and services to inform health-related decisions and actions for themselves and others

Framework

Use the Challenge Based Learning framework to help organize your thoughts, ask questions, and conduct and synthesize research to design your solution. You can download the companion workbook from page 19 to capture your ideas.

1. Engage
Connect with the big idea, think about the impact on you personally, consider new viewpoints, and focus on the challenge’s call to action.

Which area do I care about the most? Why does it matter to me or my community?

2. Investigate
Find ways to research these questions, and analyze your findings to help define your solution.

What do I need to know to help me (or us) better understand so that I (or we) can create a compelling solution?

3. Act
Your investigation will help you define your solution. It may be something personal or something that impacts your broader community. Don’t stop at defining your solution — make sure to put it into action!

Based on what I've learned, what specific actions can I (or we) take to make a difference?
Engage

For Step 1, you’ll identify and connect to a big idea, personalize it by coming up with questions, and narrow those questions down to one essential question. Below you’ll see how we apply this step to the Help Shape a Healthier Society challenge.

**Big Idea:** Health and Wellness

**Essential Question:** How can I improve the health and wellness of myself and others?

**Challenge:** Help shape a healthier society.
Let’s follow the journey of a group of educators as they work through the Challenge Based Learning framework, decide whether to focus on mental health, physical health, or health literacy (or more than one), then design and implement a solution that will make an impact on themselves and their community.

Health and wellness is important to us and our community . . .

. . . and we’re passionate about developing a solution . . .

. . . that will have a sustaining impact on those most impacted.
**Applying Engage:** First, the group took a deeper look at the definitions of the big idea, the essential question, and the challenge in Step 1, and applied it to the area they chose — health literacy.

**Big Idea:** Health Literacy

**Essential Question:** How can we ensure that all individuals and communities have equal access to information that helps them make good health decisions?

**Challenge:** Encourage others to make healthy decisions that will improve the overall health of all of our communities.

**Tip:** A challenge begins with a verb. It’s immediate, it’s actionable, and it builds excitement.
Investigate

In Step 2, the group identified questions known as *guiding questions*. Guiding questions are what the group needed to know to begin developing a solution to the challenge. They brainstormed some potential guiding questions below.

- How can we ensure that health literacy is accessible to everyone?
- Who in our community is suffering the most and why?
- What steps can we all take to make smarter personal health decisions?
- How does health literacy improve our entire society?
- What are the different types of data sources that support health literacy?
- Are there organizations we can work with in our community?
- How do we become more attentive to how health literacy impacts our personal health decisions?
Determining Their Questions: Next the group refined the guiding questions that would help them answer the key question: What do we need to know before we can design a solution?

- What are some examples of health information campaigns – locally and globally – that have impact?

- How does health literacy impact me and others in my community?

- What are the most pressing health literacy concerns in my community today?
**Extension Activity:** Using creative expression — like drawing, photography, video, or music — became a great way to determine guiding questions. The educators created posters representing some of the ideas they discussed and researched.

What are some things we can do to help us be healthier?

- Get vaccinated
- Get enough sleep
- Exercise
- "Unplug"
- Eat well
- Take a breath
Researching the Questions: Once they had their guiding questions, the group began their research. They asked themselves, Who can we interview? What other perspectives can we consider? They captured all the activities and resources they'd need to find answers to these questions.

- Attend a town hall meeting to understand the current health discussions impacting the community.

- Interview leaders of a local community health organization to learn how they're sharing important health practices with those most impacted in the community.

- Visit a local library to learn more about primary sources and how to find reliable information about health that impacts all populations.
Synthesizing the Research Findings: After completing their research, they evaluated the ideas and identified new perspectives based on the findings. This led them toward their solution.

- We identified how our research does or doesn’t align with our previous knowledge.
- We found local organizations that are making an impact.
- We established the most important themes and key points.
- We learned that our most underserved communities have fewer options when it comes to health and wellness.
- We determined who we can reach out to for help.
- We discovered other perspectives and ideas that should be considered.
- We connected to something in our collective personal experiences that we can use to inform our solution.
Act

With this final step, the group is now ready to define their solution.

Based on what we learned from our investigation, we propose the following solution . . .

How are we planning to get to the solution?

Remember: A challenge can have many solutions when there are diverse perspectives, which helps keep people more involved, engaged, and interested in the outcome.

Host a series of “Improve the Health of Our Community” events that focus on good health practices and preventative health measures for the most underserved communities in our region.
Act: The teachers wrote their plan of action, including the specific steps they would take to implement their solution and how they’d share results with others.

Plan of Action:
- Develop a project plan for the "Improve the Health of Our Community" events.
- Do one small activity to improve my personal health so that I can impact the greater community.
- Develop a marketing plan to promote the events.
- Capture images and video interviews during the events to share what we learned and how others can get involved.
**Act:** After their successful execution, they shared how they came up with their solution and the results of putting it into action. They expressed their solution's impact creatively through videos, poems, drawings, and photos, and even used their creation from the extension activity on page 11. They then shared their story with the world using #ChallengeForChange.

Look at this amazing photo of people lining up to be screened at our community event!
Reflections: It’s important that the group took time to reflect on their process. They thought about what they learned and considered the impact they made on themselves and others. Then the educators visited the Apple Education Community to share their reflections and inspire others. The journey we took with these educators is a great example of how you’ll approach your process.

The organizations that participated in our “Improve the Health of Our Community” events reported an increase in sign-ups to receive ongoing health information. Hundreds of people attended the community events. Many people put comments in the suggestion box telling us how much they learned and what new things they were going to try to be healthier.

I’ve learned that it's important to eat healthy foods, exercise, get plenty of rest, and express how I’m feeling to my family and friends. I know how important it is to find primary sources of information and how to determine what’s relevant and accurate. Because of this, I can help others in my community do the same.

This will become an annual community event series. It has also made us aware that we need to do more throughout the year to ensure that all communities have access to health information. We’ll look for ways we can support a diverse set of local health information organizations, whether through volunteering or fundraising.

What impact did I make on my personal health?

What will we keep doing based on what we learned personally and collectively?

How did our solution impact our community?
Health Challenges Guide

As we consider solutions to this global challenge, it’s important to acknowledge that healthier societies start with healthier individuals. The small steps you take to improve your personal health have an impact on the community and world. Apple has also created “mini challenges” that will inspire you to get active, eat well, and support your personal health.

Each mini challenge applies the Challenge Based Learning framework, including guiding questions to help you uncover the best health solution. The duration and frequency of time you spend on a challenge is up to you — it could be 5 or 30 minutes, a day, or a week.

Each mini challenge includes:

• **Guiding Activities**: What you can do to take on the challenge
• **How It Works**: Description of the guiding activity
• **Why It’s Helpful**: Benefits of the guiding activity
• **Guiding Questions**: Ways to think about how to approach the activity and what your solution could be
Workbook

Now it’s your turn! Whether you take on the Help Shape a Healthier Society challenge or one of the “mini challenges” from the Health Challenges Guide, use the companion workbook to begin outlining your thoughts and ideas.
Resources

Health and Wellness
Many important resources about health and wellness are available that can help you generate thoughts, inspire questions, and provide a good foundational knowledge for this challenge. You can return to these resources anytime to further explore concepts and ideas.
